After spending over 40 years in the equipment rental business, Don Ahern has seen first-hand what works and what doesn't. Parts that fail, machines that don't perform, and significant down time all add up to costs that are significantly more profound than just the financial investment it takes to get the machine up and running again.

In an effort to create a Rough Terrain Telescopic Handler that would outlast and outperform anything else in the marketplace, Xtreme Manufacturing LLC was founded in the fall of 2003. After the initial production of the XRM945, new models were added over the next few years. Several years after the first XRM945 rolled off of the assembly line, the vision of developing a full line of world-class Rough Terrain Telescopic Handlers has become a reality. Our current Xtreme XR Telehandler Line ranges from the XR5919 Compact Boom to the XR4030 Xtreme Capacity Roller Boom. From general construction to industrial applications (including Energy, Oil and Gas, Marine,

Infrastructure, and Mining), we offer an Xtreme XR Model for any job.

Our Xtreme Cube System division has grown significantly in the last couple of years. Incredibly versatile, and highly capable, the Xtreme Cube System can be tailor made to suit virtually any application: office space, maintenance facilities, information technology server rooms, fluid storage and dispensing, just to name a few. The variety of configurations and constantly evolving list of options make our Xtreme Cube System suitable for any need, no matter how large or small.

We also manufacture the EZ Loader Truck Beds, which make hauling equipment safer and more productive. With bed capacities ranging from 12,000lbs to 24,000lbs, and the convenience of a 17 second ramp deployment, transporting equipment has never been easier.

Our entire product line is proudly designed, fabricated, and assembled in the USA. Our company headquarters, based in Las Vegas, NV, is home to our Engineering, Fabrication, and Assembly Department Team Leaders. Having all of these department leaders under one roof makes for a seamless integration across all departments, creating a cohesive work environment. We have assembled the best team in the industry and our product lines reflect the talent, dedication, attention to detail, and hard work of our employees.

Being centrally located in Las Vegas, within a few miles of the Las Vegas Convention Center, affords us the unique opportunity within our industry to easily attend many of North America's largest industry trade shows. Regular attendance of these shows within the industrial and general construction specific market segments allows us to cultivate new relationships while continuing to grow existing ones.

Xtreme Manufacturing builds equipment that simply works, and consistently outperforms every competitor in the industry. While other machines are down, or simply unable to perform, our machines are on site every single day, getting the job done safer and with increased productivity.

As we look toward the future, we continue to forge ahead, staying ahead of the curve regarding options, models, and new product lines. We expect the same amount of success with our new product lines as we have experienced with our current models. The same research, development, and attention to detail are evident in every single product we manufacture.
